Maybe some other cameras have our features.

But only Argus has this lens.

There's really nothing like our 40mm four element rare earth lens. Sounds like a mouthful, but it's worth more than just a lot of features. A whole camera-ful.

This high resolution lens was designed by The Te Company. They're Argus' optical research and development affiliate.

What do we mean by "high resolution"? It's a lens quality that produces exceptional contrast and definition. And for Argus 284 owners, pictures that are *brilliant*. Sharp, clear, life-like. That's what you get with our 40 lines per millimeter lens. A sophisticated 40mm Selaite-coated optical lens system, with 4 elements (in three groups). Gives you aperture selectivity from f/2.8 to f/22. And full focusing from 3 feet to infinity.

As for features, The Argus Instant Load 284 is loaded.

But if you're from Missouri, remember...every Argus product is unconditionally guaranteed for one full year against anything. Kids. Dogs. Accidents. Soakings. Anything. Less than $90.00.
